> SCRAPED BONES AND WOODEN COFFIN 5,000 YEARS OLD RESURRECT ED FROM THE TOMBS IN EGYFT BY PROF. FLINDERS PETRIE SHOWING MARKS OF HUMAN TEETH

HOW WE KNOW THE ANCIENT EGYPTIANS WERE CANNIBALS.

NE of the important and quite start- miles south of Carlo, Here a series of costly O ling archaeological discoveries of re-rock tombs and mortuary chambers were cent times is the announcement that opened which were evidently places of the splendid builders of the pyramids, the wealthy burial. On opening one of the undisputed masters of the Arts and sciences massive coffins he expected to find the of that brilliant age-practiced cannibalism usual embalmed mummy or corpse, but in-This remarkable revelation, which mars the sear of the world's most ancient civilization, from which we have inherited so much—is not a speculative theory, but a cold fact, told by the spade and shovel of Professor W. Finders Petric, the greatest living Egyptologist and excavator, who has been so successful in bringing to light the hosts of Egyptian antiquittes and other material which the sands of Egypt have so faithfully kept. The recent uncarthing of piles of ribs and flesh scraped bonesshowing where human teeth grawed them, instead of the customary embatined body so universally employed among the ancient Egyptians—undisputedly tells the grewsome tale of the practice of cambinalism.

Stead a swathed and cut up body, that of a woman, with the flesh entirely gone from the bones, met the astounded gaze of the excavator. That this was universal and total isolated ease was shown by the subsequent fluiding of a laif a nundred elisected bodies in various parts of the old cemetery, extending over an area of half a mile.

Professor Petric concludes that the source of Egyptian canallyaism can be traced, and is probably due, to the Libyans, who invaded and excapted upper Egypt about 2,000 to 2,200 R. C. They habitually cut on the head and mutilated other parts of the body, and ate the same before burial. It will be for future excavations which are now being carried on by the Egypt Exploration Of Exploration Society under the direction of the society of the society under the direction of the society of the society of the science of the society of and regularly ate the flesh of their dead. stead a swalhed and cut up body, that of

Egyptians—indispitedly refls the grewsome tale of the practice of candibalism.

Professor Petris came across his interesting find while excavating a group of old on this subject which is destined to remark the village of Deshashah, some sixty Egypt and the Pyramid binders.
